

Every Compact® door is **custom-made to fit your project**

Every Compact® door is built to your specifications, with dimensions, appearance and functionality tailored to your project. From colours and glazing to the folding system and operator, every detail can be adapted to your requirements.

The Compact® door can also be installed on the outside of a building, making it suitable for applications such as spray booths and car washes. For easy everyday access, an integrated pedestrian door can be added.

Rather than making your project fit a standard door, we make the door fit your project and the way you use your space.

Why choose a Compact® door?

Space-efficient design

Custom-made

Design freedom

Low maintenance design

Made in the Netherlands

Designed
to fit. Made
for perfection.

Unfold a world of
opportunities

Introducing the Compact[®] door

An industrial door designed around your space.

Every space is different. Architecture, technical requirements and everyday use all place different demands on a door. When conventional door systems limit your options, you need a door that adapts to the space, not the other way around.

The Compact[®] door was designed with exactly that in mind. It folds neatly above the door opening, without the need for ceiling tracks. This leaves valuable space free for lighting, installations, crane tracks or simply a clean, uncluttered interior.

For architects, this means greater design freedom. For contractors, it provides a practical solution when ceiling space is limited. And for end users, it combines functionality, space and design in one door.

We believe an industrial door works best when it fits your needs, your space and your vision.
